

How do I download images from ARTstor?

As you are viewing images in the **Thumbnail Page**, you may see an image that you would like to download.

1. To download a copy of the image, double-click on the thumbnail to launch the image in the **Image Viewer**. In the Image Viewer footer, in the lower right corner of the window, you will see the **Save icon** ().
2. Once you click on this icon, you will be asked to review the **ARTstor Terms and Conditions of Use**. Click "OK" to agree.
3. Next, you will see your computer's directory, which will allow you to choose the location where you would like to save your image. Browse to the location on your local computer, disk, or network where you would like to save the image. You may also choose to save the ARTstor image to a portable storage device, like a CD, DVD, or flash drive.
4. Your image will download as a low resolution JPEG file, at approximately 400 or 1024 pixels on the long side. It will be accompanied by the image data information as a separate HTML file. After you download a copy of your image and save it locally, you can rename image, since it will automatically be titled with its ARTstor Image ID.

Note: If you would like to know the download size of the image before saving it, click on the "Show Data" icon () in the lower right corner of the Image Viewer window. Scroll to the bottom of the data record to view the "Download Size" field.

5. Using the Image Viewer, you also have the option to save details, rather than the entire image that you are viewing. If you zoom into the image before clicking on the **Save icon** () you will be downloading a copy of the zoomed detail. First, find the detail that you would like to save by zooming and panning within the image. For more information about zooming and panning, please see: "**Image Analysis Tools**". Once you have selected your detail, click on the **Save icon** (). The JPEG file that you will download using the same process described above will contain the zoomed detail, rather than the whole image.

Note: In order to download higher resolution files of ARTstor images (up to 3200 x 3200 pixels), you must download and view them in the Offline Image Viewer (OIV). For more information, see: "**Offline Image Viewer**" and "**Importing ARTstor images into OIV**".

If you would like to download an entire group of images as a web page, please see: "**How do I save my Image Group as a web page?**"

 **Back to the "How do I..." Menu**
